

U. S. PTO Customer No. 25280

Case #9242

AMENDMENT

Please amend the Claims as follows:

1. (Previously Presented) A set of patterned square carpet tiles, the set comprising at least two tiles with coordinating pattern and color characterized in that each tile has at least two areas of visual texture applied, the areas of visual texture providing the impression of at least two pile directions on each tile.
2. (Original) A set of carpet tiles according to claim 1 in which the pattern is applied to the tiles by printing and the visual texture is also applied by printing.
3. (Original) A set of carpet tiles according to claim 2 in which the pattern and the visual texture are applied in a single stage printing operation.
4. (Previously Presented) A set of carpet tiles according to claim 1 having four tiles in the set.
5. (Original) A set of carpet tiles according to claim 4 in which the tiles are designed by taking the pattern of one tile and rotating it through about 90, 180 and 270 degrees to create the four tiles and then applying texture to the patterned areas of each tile.
6. (Original) A set of carpet tiles according to claim 5 in which the tiles are made individual by the application of different texture to each tile.

U. S. PTO Customer No. 25280

Case #9242

7. (Previously Presented) A set of carpet tiles according to claim 6 in which the tiles are made individual by applying to each tile at least two directionally significant visual textures in two orientations.

8. (Currently Amended) A method of supplying the tiles according to claim 1 in which the tiles are at least one of packed in respective boxes of identical tiles and then laying them according to a computer generated pattern code, and randomly packed into boxes after production so they can be laid in the order they are removed from the box.

9. (Canceled)

10. (Currently Amended) A method according to claim 8-9 in which the randomization includes rotating the tiles so that the pile direction is also randomized.

11. (Currently Amended) A method according to claim 8-9 in which the randomization includes rotating the tiles so that the pile direction is also randomized.

12. (Original) A method according to claim 11 in which the printing process is a dye injection printing process.

13. (Previously Presented) A set of carpet tiles according to claim 2 having four tiles in the set.

U. S. PTO Customer No. 25280

Case #9242

14. (Previously Presented) A set of carpet tiles according to claim 3 having four tiles in the set.

15. (Previously Presented) A set of carpet tiles according to claim 5 in which the tiles are made individual by applying to each tile at least two directionally significant visual textures in two orientations.

16. (Currently Amended) A method of supplying the tiles according to claim 5 in which the tiles are at least one of packed in respective boxes of identical tiles and then laying them according to a computer generated pattern code, are randomly packed into boxes after production so they can be laid in the order they are removed from the box, and manufactured by a tile printing process.

17. (Canceled)

18. (Currently Amended) A method according to claim 16 ~~17~~ in which the randomization includes rotating the tiles so that the pile direction is also randomized.

19. (Canceled)

20. (Currently Amended) A method according to claim 16 ~~19~~ in which the printing process is a dye injection printing process.
